Connecting Science and Engineering Education Practices in Meaningful Ways: Building Bridges (Contemporary Trends and Issues in Science Education) From Ingramcontent

The need for a scientifically literate citizenry, one that is able to think critically and engage productively in the engineering design process, has never been greater. By raising engineering design to the same level as scientific inquiry the Next Generation Science Standards' (NGSS) have signaled their commitment to the integration of engineering design into the fabric of science education. This call has raised many critical questions...How well do these new standards represent what actually engineers do? Where do the deep connections among science and engineering practices lie? To what extent can (or even should) science and engineering practices co-exist in formal and informal educational spaces? Which of the core science concepts are best to leverage in the pursuit of coherent and compelling integration of engineering practices? What science important content may be pushed aside? This book, tackles many of these tough questions head on.

All of the contributing authors consider the same core question: Given the rapidly changing landscape of science education, including the elevated status of engineering design, what are the best approaches to the effective integration of the science and engineering practices? They answered with rich descriptions of pioneering approaches, critical insights, and useful practical examples of how embodying a culture of interdisciplinarity and innovation can fuel the development of a scientifically literate citizenry

. This collection of work builds traversable bridges across diverse research communities and begins to break down long standing disciplinary silos that have historically often hamstrung well-meaning efforts to bring research and practice from science and engineering together in meaningful and lasting ways.

Editorial Review

From the Back Cover

The need for a scientifically literate citizenry, one that is able to think critically and engage productively in the engineering design process, has never been greater. By raising engineering design to the same level as scientific inquiry the Next Generation Science Standards' (NGSS) have signaled their commitment to the integration of engineering design into the fabric of science education. This call has raised many critical questions...How well do these new standards represent what actually engineers do? Where do the deep connections among science and engineering practices lie? To what extent can (or even should) science and engineering practices co-exist in formal and informal educational spaces? Which of the core science concepts are best to leverage in the pursuit of coherent and compelling integration of engineering practices? What science important content may be pushed aside? This book, tackles many of these tough questions head on.

All of the contributing authors consider the same core question: Given the rapidly changing landscape of science education, including the elevated status of engineering design, what are the best approaches to the effective integration of the science and engineering practices? They answered with rich descriptions of pioneering approaches, critical insights, and useful practical examples of how embodying a culture of interdisciplinarity and innovation can fuel the development of a scientifically li

terate citizenry. This collection of work builds *traversable bridges* across diverse research communities and begins to break down long standing disciplinary silos that have historically often hamstrung well-meaning efforts to bring research and practice from science and engineering together in meaningful and lasting ways.

Users Review

From reader reviews:

Vicky Bowman:

The book Connecting Science and Engineering Education Practices in Meaningful Ways: Building Bridges (Contemporary Trends and Issues in Science Education) make you feel enjoy for your spare time. You should use to make your capable much more increase. Book can to be your best friend when you getting strain or having big problem together with your subject. If you can make looking at a book Connecting Science and Engineering Education Practices in Meaningful Ways: Building Bridges (Contemporary Trends

and Issues in Science Education) for being your habit, you can get far more advantages, like add your capable, increase your knowledge about some or all subjects. You may know everything if you like wide open and read a guide Connecting Science and Engineering Education Practices in Meaningful Ways: Building Bridges (Contemporary Trends and Issues in Science Education). Kinds of book are a lot of. It means that, science publication or encyclopedia or others. So , how do you think about this publication?

Dale Vaught:

Information is provisions for folks to get better life, information currently can get by anyone in everywhere. The information can be a know-how or any news even a huge concern. What people must be consider if those information which is inside former life are difficult to be find than now could be taking seriously which one is appropriate to believe or which one often the resource are convinced. If you receive the unstable resource then you obtain it as your main information we will see huge disadvantage for you. All of those possibilities will not happen throughout you if you take Connecting Science and Engineering Education Practices in Meaningful Ways: Building Bridges (Contemporary Trends and Issues in Science Education) as your daily resource information.

Paul Steinbach:

People live in this new day time of lifestyle always attempt to and must have the extra time or they will get lots of stress from both everyday life and work. So , once we ask do people have extra time, we will say absolutely indeed. People is human not a robot. Then we consult again, what kind of activity do you have when the spare time coming to anyone of course your answer will probably unlimited right. Then do you ever try this one, reading books. It can be your alternative in spending your spare time, the book you have read is Connecting Science and Engineering Education Practices in Meaningful Ways: Building Bridges (Contemporary Trends and Issues in Science Education).

Alice Ressler:

What is your hobby? Have you heard which question when you got learners? We believe that that query was given by teacher on their students. Many kinds of hobby, Every individual has different hobby. And also you know that little person such as reading or as examining become their hobby. You must know that reading is very important in addition to book as to be the factor. Book is important thing to increase you knowledge, except your own personal teacher or lecturer. You find good news or update about something by book. Different categories of books that can you choose to use be your object. One of them are these claims Connecting Science and Engineering Education Practices in Meaningful Ways: Building Bridges (Contemporary Trends and Issues in Science Education).
