**Descriptive Data Mining (Computational Risk Management)** By David L. Olson

This book offers an overview of knowledge management. It starts with an introduction to the subject, placing descriptive models in the context of the overall field as well as within the more specific field of data mining analysis. Chapter 2 covers data visualization, including directions for accessing R open source software (described through Rattle). Both R and Rattle are free to students. Chapter 3 then describes market basket analysis, comparing it with more advanced models, and addresses the concept of lift. Subsequently, Chapter 4 describes smarketing RFM models and compares it with more advanced predictive models. Next, Chapter 5 describes association rules, including the APriori algorithm and provides software support from R. Chapter 6 covers cluster analysis, including software support from R (Rattle), KNIME, and WEKA, all of which are open source. Chapter 7 goes on to describe link analysis, social network metrics, and open source NodeXL software, and demonstrates link analysis application using PolyAnalyst output. Chapter 8 concludes the monograph.

Using business-related data to demonstrate models, this descriptive book explains how methods work with some citations, but without detailed references. The data sets and software selected are widely available and can easily be accessed.

## **Editorial Review**

From the Back Cover

This book offers an overview of knowledge management. It starts with an introduction to the subject, placing descriptive models in the context of the overall field as well as within the more specific field of data mining analysis. Chapter 2 covers data visualization, including directions for accessing R open source software (described through Rattle). Both R and Rattle are free to students. Chapter 3 then describes market basket analysis, comparing it with more advanced models, and addresses the concept of lift. Subsequently, Chapter 4 describes smarketing RFM models and compares it with more advanced predictive models. Next, Chapter 5 describes association rules, including the APriori algorithm and provides software support from R. Chapter 6 covers cluster analysis, including software support from R (Rattle), KNIME, and WEKA, all of which are open source. Chapter 7 goes on to describe link analysis, social network metrics, and open source NodeXL software, and demonstrates link analysis application using PolyAnalyst output. Chapter 8 concludes the monograph.

Using business-related data to demonstrate models, this descriptive book explains how methods work with some citations, but without detailed references. The data sets and software selected are widely available and can easily be accessed.

### **About the Author**

David L. Olson is the James & H.K. Stuart Professor in MIS and Chancellor's Professor at the University of Nebraska. He has published over 200 articles in refereed journals, primarily on the topic of multiple objective decision-making and information technology. He has authored over 20 books, is co-editor-in-chief of the International Journal of Services Sciences and associate editor of a number of journals. He has given over 150 presentations at international and national conferences. He is a member of the Decision Sciences Institute, the Institute for Operations Research and Management Sciences, and the Multiple Criteria Decision Making Society. He was a Lowry Mays endowed Professor at Texas A&M University from 1999 to 2001, was named the Raymond E. Miles Distinguished Scholar in 2002, and was James C. and Rhonda Seacrest Fellow from 2005 to 2006. He was named Best Enterprise Information Systems Educator by IFIP in 2006. He is a Fellow of the Decision Sciences Institute.

## **Users Review**

### **From reader reviews:**

#### **Richard Mills:**

The event that you get from Descriptive Data Mining (Computational Risk Management) will be the more deep you digging the information that hide into the words the more you get thinking about reading it. It does not mean that this book is hard to understand but Descriptive Data Mining (Computational Risk Management) giving you buzz feeling of reading. The article author conveys their point in particular way that can be understood through anyone who read it because the author of this book is well-known enough. This book also makes your own personal vocabulary increase well. So it is easy to understand then can go along, both in printed or e-book style are available. We highly recommend you for having this Descriptive

Data Mining (Computational Risk Management) instantly.

**James Robinson:**

Descriptive Data Mining (Computational Risk Management) can be one of your starter books that are good idea. All of us recommend that straight away because this e-book has good vocabulary that can increase your knowledge in language, easy to understand, bit entertaining but delivering the information. The article writer giving his/her effort that will put every word into satisfaction arrangement in writing Descriptive Data Mining (Computational Risk Management) but doesn't forget the main stage, giving the reader the hottest along with based confirm resource data that maybe you can be considered one of it. This great information can easily drawn you into brand new stage of crucial pondering.

**April Cotton:**

Reading a book for being new life style in this calendar year; every people loves to learn a book. When you examine a book you can get a large amount of benefit. When you read books, you can improve your knowledge, simply because book has a lot of information onto it. The information that you will get depend on what kinds of book that you have read. If you wish to get information about your analysis, you can read education books, but if you want to entertain yourself you are able to a fiction books, such us novel, comics, in addition to soon. The Descriptive Data Mining (Computational Risk Management) provide you with a new experience in reading through a book.

**Randy Jones:**

That book can make you to feel relax. This book Descriptive Data Mining (Computational Risk Management) was vibrant and of course has pictures on there. As we know that book Descriptive Data Mining (Computational Risk Management) has many kinds or genre. Start from kids until teens. For example Naruto or Detective Conan you can read and feel that you are the character on there. Therefore , not at all of book tend to be make you bored, any it makes you feel happy, fun and unwind. Try to choose the best book to suit your needs and try to like reading which.
