## Management Planning for Nature Conservation: A Theoretical Basis & Practical Guide By Mike Alexander

The first edition of Mike Alexander's *Management Planning for Nature Conservation*, brought a new dimension to the modern literature on conservation management. This second edition, a significant enhancement of the original, deals with the development both, conceptual and practical, of adaptive management planning for nature conservation. It is about preparing management plans, and guides the reader through the entire process. Case-studies, including a conservation and access plan, demonstrate the planning process in action. This approach to planning can be applied to any place which is managed entirely, or in part, for wildlife. It can be applied to the management of species or habitats in any circumstance, regardless of site designation. The process is fully compatible with the Convention on Biological Diversity's 'ecosystem approach' to conservation management.

Mike Alexander has long been at the forefront of developing management planning for conservation, with experience ranging from Uganda to Estonia, and from Costa Rica to Wales. He is the General Secretary of the Conservation Management System Consortium, a group of organisations with a common aim of raising standards and developing best practice in conservation management and planning. In 2012 Mike Alexander was elected a Fellow of the Society of Biology in recognition of his contribution to nature conservation and in particular management planning.

This book has drawn on the experiences and expertise of the CMS consortium and other leaders in both conservation research and wildlife management from around the world. It is essential reading for professional conservation managers and any student studying management planning for conservation within a range of degree and postgraduate courses.

### **Editorial Review**

#### Review

From the book reviews:

“This book is essential for nature conservation planners and managers from academia and various governmental and private agencies. Summing Up: Highly recommended. Upper-division undergraduates through professionals/practitioners.” (R. L. Smith, *Choice*, Vol. 51 (8), April, 2014)

“I was very happy to recommend this book to my undergraduate and postgraduate students as soon as I obtained a copy. This is a hands-on book, and offers an informative outline of what management planning for conservation entails in practice, including how to develop an action plan, which is a skill that standard academic texts seldom provide. One striking aspect of the book is its logical structure, and plain but authoritative tone.” (Munir Morad, *International Journal of Environmental Studies*, Vol. 66 (3), 2009)

#### From the Back Cover

The first edition of Mike Alexander's *Management Planning for Nature Conservation*, brought a new dimension to the modern literature on conservation management. This second edition, a significant enhancement of the original, deals with the development both, conceptual and practical, of adaptive management planning for nature conservation. It is about preparing management plans, and guides the reader through the entire process. Case studies, including a conservation and access plan, demonstrate the planning process in action. This approach to planning can be applied to any place which is managed entirely, or in part, for wildlife. It can be applied to the management of species or habitats in any circumstance, regardless of site designation. The process is fully compatible with the Convention on Biological Diversity's 'ecosystem approach' to conservation management.

Mike Alexander has long been at the forefront of developing management planning for conservation, with experience ranging from Uganda to Estonia, and from Costa Rica to Wales. He is the General Secretary of the Conservation Management System Consortium, a group of organisations with a common aim of raising standards and developing best practice in conservation management and planning. This book has drawn on the experiences and expertise of the CMS consortium and other leaders in both conservation research and wildlife management from around the world. It is essential reading for professional conservation managers and any student studying management planning for conservation within a range of degree and postgraduate courses.

#### About the Author

Mike Alexander originally trained in Fine Arts and Sculpture. He first got involved in conservation working in bird observatories on Skokholm and the Calf of Man, followed by research into oil pollution for the Field Studies Council.

He spent 10 years on Skomer Island - probably the most important and formative period of his life. On leaving the Island he joined the Countryside Council for Wales as a National Nature Reserve (NNR) warden, covering Morfa Harlech and Morfa Dyffryn, Cadair Idris, Rhinog and Coed Llety Walter in Meirioneth. He became concerned at this time by the lack of management planning and systematic recording and in 1987 developed a paper system for planning and recording work on nature reserves. This led to collaboration with James Perrins, a long term friend, resulting eventually in the development of the CMS software and Consortium.

Mike is employed by CCW as Conservation Management Coordinator, with responsibility for defining and obtaining appropriate standards of management on all statutory sites in Wales. His international involvement in recent years has included work for ICONA (Spanish National Parks), Costa Rica National Parks, the Wildlife Institute of India, the Ramsar Bureau, Estonia National Parks etc. Author of "The Guide to Management Planning in Nature Reserves and Protected Areas", recognised by many as a definitive work on the subject. When not actively involved in his full time work (a rare occurrence!), he spends time in wood turning and making furniture. He is also a very keen photographer and has many published photographs to his name.

In 2012 Mike Alexander was elected a Fellow of the Society of Biology in recognition of his contribution to nature conservation and in particular management planning

## **Users Review**

### **From reader reviews:**

#### **Joseph Wilson:**

What do you regarding book? It is not important to you? Or just adding material when you need something to explain what your own problem? How about your spare time? Or are you busy man? If you don't have spare time to complete others business, it is make you feel bored faster. And you have time? What did you do? All people has many questions above. They should answer that question due to the fact just their can do this. It said that about e-book. Book is familiar on every person. Yes, it is correct. Because start from on jardín de infancia until university need this kind of Management Planning for Nature Conservation: A Theoretical Basis & Practical Guide to read.

#### **James Peters:**

Management Planning for Nature Conservation: A Theoretical Basis & Practical Guide can be one of your basic books that are good idea. We recommend that straight away because this e-book has good vocabulary which could increase your knowledge in language, easy to understand, bit entertaining but nevertheless delivering the information. The article author giving his/her effort to get every word into pleasure arrangement in writing Management Planning for Nature Conservation: A Theoretical Basis & Practical Guide nevertheless doesn't forget the main place, giving the reader the hottest and also based confirm resource info that maybe you can be one among it. This great information can certainly drawn you into brand-new stage of crucial pondering.

**Gabrielle Ponds:**

As a pupil exactly feel bored to reading. If their teacher requested them to go to the library or make summary for some reserve, they are complained. Just very little students that has reading's heart and soul or real their leisure activity. They just do what the instructor want, like asked to go to the library. They go to right now there but nothing reading significantly. Any students feel that examining is not important, boring and can't see colorful photos on there. Yeah, it is being complicated. Book is very important for you personally. As we know that on this period, many ways to get whatever you want. Likewise word says, many ways to reach Chinese's country. So , this Management Planning for Nature Conservation: A Theoretical Basis & Practical Guide can make you really feel more interested to read.

**Jeannie Brenner:**

Reading a guide make you to get more knowledge from it. You can take knowledge and information originating from a book. Book is prepared or printed or illustrated from each source that will filled update of news. In this particular modern era like now, many ways to get information are available for an individual. From media social just like newspaper, magazines, science publication, encyclopedia, reference book, book and comic. You can add your knowledge by that book. Ready to spend your spare time to spread out your book? Or just looking for the Management Planning for Nature Conservation: A Theoretical Basis & Practical Guide when you needed it?
